Abstract:

The people day by day are more concentrated on quality education in University system. The agenda is the overall need to be in improvement in education system. If this is not possible to system working, then imaginably system need to be change and change management techniques are to be applied. There are lot of opportunities available in most higher reputed institute today. But higher-level student doing high class education but still today scenario is very pathetic. At the University level there is no guidance technique being used. The technique of development of quality Six Sigma Concept, TQM concept & so many techniques are implemented but there is still lot of scope which remains in education orbit.
