

Analysis of Energy consumption in boat propulsion system

**Dr.S.S.Khandare ,
Mechanical engineering consultant and Director of Rainbow Research lab.**

This paper discusses about the various types boat and the type boat propulsion system used. There are different types of tug boats being studied in this work. There are variety of propulsion system used are studied and discussed in this paper. This paper discusses the energy consumption of the variety of propulsions system being used and resistance occurring in the system.
